#### **Survey Information**

My name is Sue Fletcher-Watson, and I am a research psychologist based at Edinburgh University, UK, with a particular interest in the study of autism spectrum disorders. I am part of an international group of researchers running this online survey to investigate how the autism community feels about research into the earliest signs of autism in babies.

Before you proceed, you need to understand why the research is being done and what it will involve for you. Please take time to read the following information carefully. Talk to others about the study if you wish. Contact me if there is anything that is not clear or if you would like more information: sue.fletcher-watson@ed.ac.uk

This survey will gather information from people with an interest in autism research, with a particular focus on:

- · Parents of a child with autism
- · Autistic people
- Practitioners (teachers, doctors, therapists) who work with individuals with autism

The goal is to find out how these different 'stakeholders' feel about a specific strand of research which is looking for the earliest signs of autism in babies and toddlers.

The questions on the next few pages will ask you about

- You your gender, where you live (country only), your age, your education and your job
- We will also ask you to define your role in the autism community and ask you specific questions based on that definition. For example, parents will be asked about the ages, genders and diagnostic status of their children. Adults will be asked about their own diagnosis. Practitioners will be asked about their qualifications and client group.
- The main part of the survey will be asking about how you think research into early autism should be done.

We will not ask for any identifying information – e.g. your name, your full address.

Using the survey data, we will be writing a document for researchers to help them respond to the community when designing new studies. We will also write a short, accessible report for everyone who took part in the study. If you want, at the end of the survey, you can fill in your email address to receive a copy of this document when it is completed.

Ethics approval has been given by the University of Edinburgh. Copies of this letter are available if you wish to see them.

Thank you for taking the time to read this Information. If you are happy to proceed please move to the next page and complete the consent form

#### **Consent form**

Please read the consent form below:
st1. If you are happy to complete this survey, please complete the consent form by selecting each item:
☐ I have read and understood the survey information sheet
I understand that all data collected from this survey will be anonymously coded and stored confidentially and securely
☐ I am willing to take part in this research survey

## Respondent categories 2. Please provide your gender. C Female Would rather not categorise myself 3. Please provide your age. 4. Please state the country you are originally from: 5. Please state the country you are living in: st6. Please choose the one respondent category that best applies to your situation. Please note you can answer the survey in only one way. For example, if you are both a parent and an autistic adult please choose only one category. Autistic Adult Parent Practitioner (e.g. medic, therapist) C Teacher Other (please specify)

#### **Autistic Adult respondent background**

#### **Intro text**

The questions on the next few pages will ask you about a specific area of autism research looking at early signs of autism in babies and toddlers. Please read this background information before going on to the next stage of the survey.

Autism is rarely diagnosed before the age of three years old. So there are three important years of development which we know very little about. Also, autism is present in about 1% of the population. This means we'd need to work with 1000 babies in order to find just 10 who turn out to have an autism diagnosis later on. So instead researchers recruit babies with a higher-than usual likelihood of developing autism. These are often babies who already have an older brother or sister with autism, or sometimes babies who are born premature.

You may have been involved in a study like this, or heard about it. It is a big commitment for families, as they are asked to come in for a series of appointments from when their child is very young (maybe just after birth) until they are three years old or more. Families may be asked to wait a long time before they receive any information about their child's personal profile and these studies do not replace usual diagnostic services.

Sometimes the studies involve an 'intervention' - some extra help for parents or children, designed to support positive progress. However more often the studies are 'observational' meaning that researchers record information about the child in the study but don't change anything or make any suggestions to parents.

## **Reasons for Research** 51. Do you think research into the early signs of autism should be done? Definitely yes Probably yes Probably not O Definitely not Not sure 52. What are the most important questions scientists should be asking about early autism? Please rank the options in order of importance, where 1 = most important You can rank options by selecting the number in the menu on the left or dragging them up and down into the right place. What is the genetic basis of autism? ▼ | Is autism present before birth? **~** | How does autism develop in early life? ▼ | What are the signs of autism in babies? What aspects of the environment (i.e. things we can change) contribute to autism? When does autism "start"? Are all infants who later get an autism diagnosis alike?

<b>EAR</b>: Engaging in Autism Research -<i> a survey study with the

To help very young children develop skills which mean they don't later get an autism diagnosis  To provide clinicians with better understanding of the early signs of autism  To help parents who are concerned get a quick and simple diagnosis  To help design intervention programmes  To understand the unique development of autistic children  To help provide services for young children at higher likelihood of autism  That practical information could research provide for you or for people in your tion?  The rank the options in order of importance, where 1 = most important can rank options by selecting the number in the menu on the left or dragging and down into the right place.  What are the early signs of autism in babies  What is the pathway by which young children with autism develop  What are the most effective early interventions for autism  What is the chance that I will have a second child with autism if I already have one  What is the chance that I will have an autistic child if I have autism	<b>-</b>	To identify autism earlier in life

55. What should be the direct benefits for people who take part in early autism research studies?

Please rank the options in order of importance, where 1 = most important

<b>V</b>	Information about autism generally
<b>T</b>	Information about themselves and their family
<b>T</b>	Insight into the research process
<b>T</b>	Detailed profiles of their child with autism (e.g. strengths and difficulties, ability level)
▼	Detailed profiles of their other children (e.g. strengths and difficulties, ability level)
<b>T</b>	Access to new intervention techniques
<b>~</b>	Attention from an expert clinical and research team

### **Involvement** Please think about if you were considering being part of an early autism research study, as a participating family. 56. How would you prefer to be contacted about involvement in a new research study? Please tick all that apply Personal phone call Personal email A personal letter By subscription to a research newsletter Personal referral from a clinician Other (please specify) 57. How would you like to receive more information about it, after the initial approach? Information on a website Face to face with a researcher Face to face with a clinician A letter from the research team A letter from a clinician A phone call from the research team A phone call from a clinician Email from the research team Email from a clinician Other (please specify)

58. What information is most important in making your decision to become involved or not?

Please rank the statements where 1 = most important.

You can assign rankings by using the menus on the left or dragging statements up and down.

<b>V</b>	The science behind the research
V	Time commitment for participants in the study
<b>V</b>	What it will involve for you
<b>V</b>	What it will involve for your child
<b>V</b>	Details about the expertise of the research team
<b>V</b>	The long-term goals of the research
<b>V</b>	Whether there is an intervention component

#### **Measurements**

These questions are about the type of information that researchers might collect in early autism studies. If you are not, please imagine that you are the parent of an autistic child.

## 59. Which types of information would you allow to be collected from your child? Please tick all that apply

	Definitely not	Probably not	Probably yes	Definitely yes	I don't know what this is
Blood samples	0	0	0	O	0
DNA samples (cheek swab)	O	0	0	O	0
Brain scans (MRI)	0	0	0	0	0
Recording where they are looking (non-invasive eye-tracking)	0	0	0	0	0
Film of your child playing with you	0	0	0	0	0
Film of your child playing with a researcher	O	O	O	O	O
Copies of medical records	0	0	0	O	0
Diagnostic assessments	0	0	0	0	0
Ability tests (i.e. mental age tests)	O	O	O	O	0
Other play-based tests	0	0	O	0	O

## 60. Which types of information would you allow to be collected from you? Please tick all that apply

	Definitely not	Probably not	Probably yes	Definitely yes	I don't know what this is
Blood samples	0	O	O	O	O
DNA samples (cheek swab)	0	O	0	O	0
Brain scans (MRI)	0	0	0	O	O
Recording where I am looking (non-invasive eye-tracking)	O	0	0	O	O
Film of you playing with your child	O	O	O	O	0
Questionnaires about you	$\circ$	$\circ$	0	O	0
Questionnaires about your child	0	O	0	O	O
Family medical history report form	0	O	0	O	0
Copies of medical records	0	0	0	0	0
Diagnostic assessments	O	0	0	0	0
Measures of autism characteristics	O	O	O	0	0
Ability tests (i.e. IQ tests)	0	0	0	O	0
Other puzzle-based tests	0	0	0	0	0

#### 61. Where and how would you agree to assessments taking place?

	Definitely not	Probably not	Probably yes	Definitely yes
Home visits	0	0	0	0
Visits to a university	0	0	O	O
Visits to a hospital	O	0	O	O
By telephone	O	0	0	C
By post	0	0	0	O

## 62. After data has been collected, what information should be disclosed to the parent? Please tick all that apply

☐ Full disclosure of child's scores on everything
Only inform parent if there is cause for concern
Pass on any concerns to the child's GP rather than parents directly
☐ Don't tell parents anything
☐ General study findings
Other (please specify)

63. Do you have any other comments on measurement issues in autism research?

#### Intervention

64.	Some	early autism studies have an intervention component. How do you feel about
this	s?	
0	Essentia	al part of involvement
0	Not ess	ential for involvement to be worthwhile
0	Would p	refer studies not to involve intervention
65.	Shoul	d an intervention be offered if it is not yet proven to be effective?
0	Yes	
0	No	
66.	If pro	vided, who should an intervention be provided for?
		der in terms of priority where 1 = highest priority.
_		assign rankings by using the menus on the left or dragging statements up and
dov	vn.	
		Infants and young children who are more likely to develop autism
	<b>T</b>	Infants and young children who display early signs of autism
	•	Infants and young children who have a confirmed diagnosis
	<b>T</b>	Infants and young children who are experiencing difficulties associated with autism
	<b>T</b>	Infants and young children whose parents have raised concerns
67.	What	sort of interventions would be preferred?
Ple	ase ra	nk the statements where 1 = most preferred.
		assign rankings by using the menus on the left or dragging statements up and
dov	vn.	
L		One-to-one therapy at home
	<b>T</b>	One-to-one therapy in a clinic
	<b>T</b>	Parent-training
	<b>V</b>	Technology-based intervention (e.g. online advice, therapeutic iPad apps)
	<b>•</b>	Nursery staff training
	<b>V</b>	Medical (drugs) intervention

#### At-risk Language

68. Academic papers in this research area often use the phrase "at risk" to describe babies who are more likely to receive a diagnosis of autism later, because they have an older sibling with autism or because of another factor (e.g. being born very pre-term). What other language could we use instead?

	ank phrases from the one you like best (1) to the one you like least (7).
•	Special infant groups
<b>-</b>	Infants with high autism likelihood
•	Infants susceptible to autism
•	Pre-autistic infants
•	Infants with higher chance of developing autism
•	Infants with increased susceptibility for autism
•	Infants at risk of autism
69. Any c	other suggestions?

#### **Statements**

# 70. Before creating this survey we ran some group discussions with members of the autism community. How much do you agree or disagree with the statements below, which we collected from these focus groups?

	Strongly Disagree	Disagree	Disagree	Agree	Strongly Agree
Sharing information between researchers and participating parents is essential	О	О	Disagree C	О	С
Taking part in an early autism study might influence parenting	O	0	O	0	O
Autism diagnosis is not necessarily a negative outcome	0	0	O	0	0
Parents don't necessarily realise that autism is influenced by genetics	0	O	0	0	O
'at-risk' language makes parents feel that they are to blame for their child's autism	•	O	Ō	•	O
Early autism studies ignore the older sibling who already has a diagnosis	0	0	О	0	O
Parents want to work with clinicians not researchers	O	0	O	0	O
Early autism studies should include an intervention, not just observation	0	0	O	0	0
Getting earlier diagnosis of autism is important	O	0	0	O	O
Early autism researchers assume that autism diagnosis is a negative outcome	0	0	O	0	0
Parents in a long-running study might change their mind about what they want to agree to as the study goes on	•	Ō	O	•	O
Long-running studies should be responsive to families' needs and opinions	0	C	C	С	O

# <b>EAR</b>: Engaging in Autism Research -<i> a survey study with the **Final Comments** Thank you very much for completing this survey! 71. Is there anything else you would like to tell us? 72. Once all responses have been collected we will be writing a short report. If you would like to receive a copy of this please leave your email address below. It will not be used for any other purpose.
